Completely modular P3D flight model for P3D v. 10/11. The main module is the APs module, which includes all of the APs. The second module, which is 'optional', can be switched on and off. If the second module is switched off, the aircraft will be restricted to FLARM settings. This is recommended for only the most ambitious modellers. The third module is the X-Plane PMDG 747 which offers a totally custom P3D flight model. It offers a number of high quality functions including real cockpit feel and DFS 3D, real S2 textures, 3D X-Plane systems with DCS switches, an improved landing gear and landing lights. Flying at both a real and a virtual altitude, all the aircraft's features are visible as they should be. The APs module includes realistic engines, tail fins and cockpit panels. It also contains all of the APs including the exterior, interior, engine, avionics, wheels, landing gear, takeoff, landing, taxiing and approach animations. All of the APs are animated in two different aircraft, a 747-400 and a 747-400 Freighter. The 747 X-Plane PMDG is a highly accurate and detailed flight model. It is true to the real aircraft in every respect including equipment, systems, radio, landing lights, cockpit, engines, engine and tire noise, landing gear and controls. All this is on top of a brand new P3D X-Plane that has been custom designed to fit the real aircraft. Technical details for the 747 P3D X-Plane PMDG are detailed in our technical section XPlane PMDG 747 for FSX, FS2004, FS2004 Steam Edition, FSX Steam Edition, Prepar3D. If your aircraft can fly in FSX, FS2004 or FS2004 Steam Edition this is the only P3D aircraft module you will ever need. FSX/FS2004 is a full scale simulation that enables you to fly your aircraft at realistic altitudes with a maximum speed of 500 knots. In addition to this, you can choose from a variety of airports and flight sim modes. Designed for FSX, FS2004, FS2004 Steam Edition and Prepar3D, this module is designed to be your one stop flight model solution and includes all the features and aircraft capabilities that make FSX/FS2004 such a favourite.
